MAILBAG

Vertical bagging machine
Ideal for publishing industry

Description

MAILBAG is an automatic vertical bagging machine ideal for magazines, reports, catalogues and publications.

The bag sealer machine works with a film reel mounted on a motorised roller. An adaptor folds the film and forms a closed bag containing the products.

At the end of the process the product is automatically ejected. Really simple!

Optionals

- Digital control panel
- Booklet length self-adjustment with photocell
- Independent hot wire sealing bars
- Cutting temperature electronic control
- Built-in piece counter
- Automatic drive of the product that needs to be packaged
- Wide support surface
